ITAS191 — Assignment 1

Portfolio v1

> **Issued:** Tuesday 6 October · **Demo:** Tuesday 27 October, in class · **Zip due:** Monday 2 November, 11:59 pm · **Marks:** 20 · **15%** of your final grade

> This is the first real version of the site you are building all term: the home page of your portfolio. In week 6 it goes live on the internet. In December you launch it. **Build it to be shown** — to an employer, a client, anyone who types your name into a search engine.

Work in `~/itas191/a1/`: an `index.html` and a `style.css`, linked. Styles go in `style.css` only — no `<style>` blocks, no `style=` attributes.

What the page needs

---

1. Structure and navigation

- A **header** with your name and a **nav** menu.
- Three sections, each with an `id`: **About Me**, **Projects**, and **Contact**.
- Use the layout elements for what the content is — `header`, `nav`, `main`, `section`, `footer`.
- Every nav link **jumps** to its section (`href="#about"` to `id="about"` — the Nanaimo legend trick).

---

2. Your visual system

- The type pairing and the palette from Lab 4 — or better ones.
- The **palette comment** at the top of `style.css`: each colour, its job, and its contrast ratio. Every text colour at **4.5:1 or better** against its background.
- A visible type scale.

---

3. Content

About Me

- A short paragraph that sounds like you.
- A list of 3–5 skills you have or are learning.

- **An image**, sized sensibly and centred. Week 5 covers images properly. It can be a photo of you — only if you want one on a public site — or an illustration, an avatar, or something you made. Keep the file **in your folder**; do not link to an image on someone else's server. (This assignment's previous version linked to a free placeholder-avatar website. When checked in October, it no longer worked. That is the lesson.)

Projects

- **Three things you want to accomplish** in your life or career — goals, projects, things you would love to work on.
- Each with **an image or a link** to more about it.
- Side by side as a **flex row that wraps** onto the next line when there is no room: `flex-wrap: wrap;`.

Contact

- A **professional email address you are willing to publish.** This page will be public from week 6 — consider an address you use only for this.
- A **profile link**: your GitHub profile (you will have one after week 6), and LinkedIn if you have it. LinkedIn is not required.
- **Never** a phone number or a home address.

---

4. Interaction

Hover **and** visible keyboard focus on the nav links and the project titles, with a transition. Pass the Tab test from Lab 4.

---

5. A 3D element

A **Three.js** scene, generated with an assistant from the Lab 4 brief (`scene-prompt.md`), or your own prompt keeping its fixed rules:

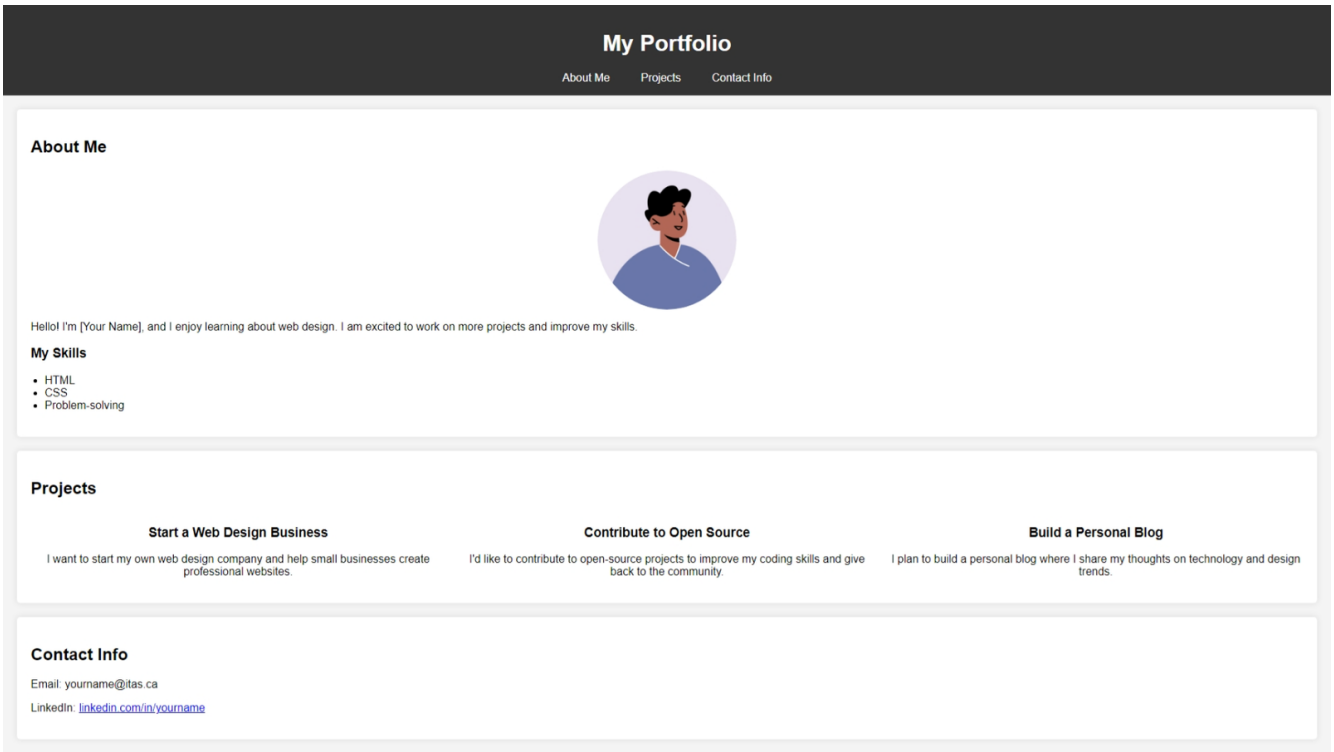

- in your palette;
- placed **where it serves the page** — a hero beside your name, an object that stands for you in About Me, an illustration for one of your projects;
- with **at least two art-directed changes** from the first result;
- and a `prompts.md` in your folder recording every prompt and what changed.

You are its art director: at the demo you will be asked what you asked for, what you changed, and where your colours live in its code.

6. Valid

Both files through both validators — HTML at https://validator.w3.org, CSS at https://jigsaw.w3.org/css-validator/. Zero errors.

The structure, not the style

That is the example that came with this assignment's previous version. Its **structure** is exactly what you need — header and nav, About Me with a picture and skills, three projects in a row, contact. Its **look** is what every unstyled portfolio looks like: one default font, a dark bar, everything centred. Keep the structure. Make the look yours.

A suggested timeline

Week		
4 · Oct 6	Lab 4	Structure, your fonts and palette, the nav, the 3D element
5 · Oct 20	Lab 5	The images — About Me and Projects
6 · Oct 27	Lab 6	**Demo in class.** The site goes live on GitHub Pages the same day
— · Nov 2		**Zip due**, 11:59 pm

No class on Tuesday 13 October — VIU runs the Monday schedule that day.

Marking — 20 marks

	Component	Marks
C1	Structure and navigation — layout elements, three sections, every nav link jumps	3
C2	Visual system — pairing, scale, palette with recorded ratios, applied throughout	3
C3	Content — About Me with skills and an image, three projects in a wrapping flex row, publishable contact	3
C4	Interaction — hover and visible focus, with a transition	1
C5	The 3D element — inside the fixed rules, in your palette, two art-directed changes, `prompts.md`	2
C6	Both validators clean	2
DU	**Demonstrates understanding** — your demo, in class, 27 October	**6**
		20

The demo is a two-minute walkthrough at your machine. Expect to be asked about any part of the page: why this layout, what your contrast ratio is, where focus goes, what you asked the assistant for.

Submitting

Zip your `a1` folder as **`firstname.lastname_assignment1.zip`** — `index.html`, `style.css`, `prompts.md`, and your images — and upload it to **Assignment 1** on the Portal by **Monday 2 November, 11:59 pm**. If your site went live in week 6, paste its address into the submission comment.

Late work: see the course outline.

On using AI

Permitted and encouraged — **disclose it, own it.** One line at the bottom of each file says what you asked for, and `prompts.md` covers the 3D element. Six of the twenty marks are your demo, and an assistant cannot give it for you: if you could not rebuild a part of this page, you have not finished it yet.

If something goes wrong

What you see	What it means	What to do
An image does not show	The path or the file name's case does not match	Keep images in your folder; names are case-sensitive. DevTools → Network shows the failed request in red.
A nav link does not jump	The `href="#…"` and the section's `id` differ	Copy the `id`, paste it after the `#`.
The projects do not wrap	`flex-wrap: wrap;` is missing, or on the wrong element	It goes on the container that holds the three projects.
Your fonts do not appear	The Google Fonts `<link>` is missing or below your stylesheet	Font link first; family names exactly as Google gives them.
The scene is blank	Import map missing, after the module script, or doubled	F12 → **Console**. One import map per page.
The validator flags your `<style>` block	Styles must live in `style.css`	Move them. That is a requirement, not a preference.
